

Evacuaid emergency bracelet

A lifesaving tool at the workplace

Safer, faster and easier evacuation at the workplace

The combination of light and sound has proven to be a lifesaver for firemen through the years. The Evacuaid emergency bracelet is based on this principle and specially designed so that employees get a tool that is useful and lifesaving in high risk situations. Evacuaid, developed in Norway, is a unique emergency bracelet for everybody who wants a safer, faster and easier evacuation.

Increased personal safety

The evacuation modus of the emergency bracelet gives light while leaving you're your hands to deal with necessary tasks. When activated, the emergency modus will give off a strong strobe-light and a siren, which will allow you to see and be seen, even in the darkness in case of heavy smoke or a power outage. If you were to be immobilized or lose consciousness due to for example inhaling smoke, the emergency modus will automatically be activated by a motion sensor. This will substantially increase your chance of being located.

In case of an accident where you are conscious yet unable to warn your colleagues, Evacuaid can be activated manually. Intense light and sound signals will then warn your colleagues that you are in danger.

Protect your colleagues

In a chaotic situation it is not given that everybody will be able to get out. Some may be immobilized, others may panic. If it is impossible to get everybody out, Evacuaid can easily be attached to the wrist. As a colleague, you will then have severely increased the chances of your co-workers being located.

Simple lifesaver

Simplicity is the core principle of Evacuaid. Simplicity is also crucial in high-stress situations like evacuations and escapes. This is why Evacuaid is activated automatically and requires no training. At the same time, the bracelet requires no maintenance, is always ready for use and operates independently of other complicated systems. Evacuaid should always be kept easily accessible and can be stored hanging on walls in high-risk areas, or carried by the users.

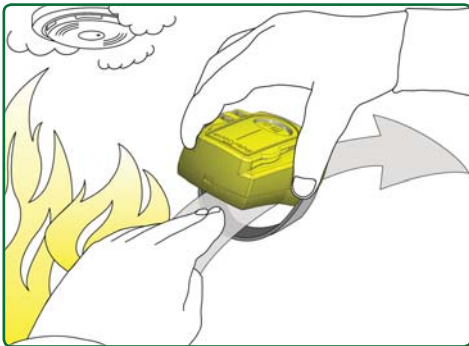

Unique technology developed and produced in Norway

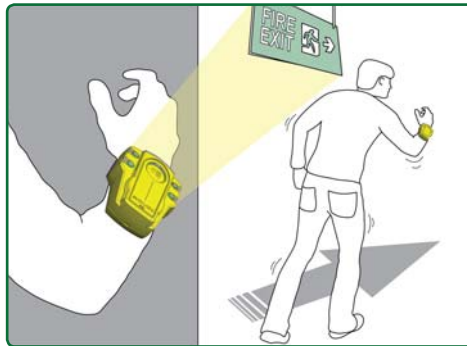

User friendliness and security in every detail

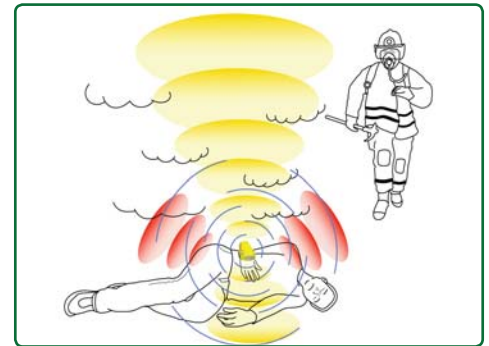

Increased preparedness and security for the user

Automatic activation
Evacuaid is made for high-stress situations and is activated immediately once attached to the wrist.

See
Find the way out or help others to safety. With Evacuaid, you have full use of both hands even while using the torch.

Be seen
Emergency modus activates automatically or manually. Strong sound and light signals make sure that you are seen and heard.

A simple and reliable lifesaver

Handling emergency situations requires simplicity at all levels. This has also been our philosophy in developing Evacuaid. The result is a unique emergency bracelet that through simple technology revolutionises the way we evacuate in case fire or other emergencies. The bracelet is developed in Norway, and is the world's first intelligent emergency torch.
