

# ESCAPE-CARRY CHAIR®

*Transportation of persons on stairs*

Fold out carry handle

Adjustable handles on the lower

Reflecting straps

This especially designed Escape-Carry Chair® is an evacuation / carry chair for transporting people over the stairs. By use of the Escape-Carry Chair® two helpers or more can carry a person up or down the stairs using the carrying handles. By use of the folded out standard with wheels the helper can transport the occupant horizontally to a place of safety.

On the lower side of the Escape-Carry Chair® are two glidebelt cassettes. In this cassette specially designed glidebelts are assembled, which rotate. Due to this a unique glide/brake system comes into existence which takes care of the braking action during the transportation downstairs.

One trained helper can transport a person simply via straight stairs to lower floors, so carrying occupants is no longer necessary; depending on the situation\*.

Escape-Carry Chairs® are used by **fire brigades** and **ambulance employees**.

*These Carry Chairs® are available in two models:*

- *Escape-Carry Chair®, model Standard*
- *Escape-Carry Chair®, model StandardPLUS*

*Each model can be extended with arm- and/or footrests.*

## Specifications Standard model:

- aluminium frame, non enamelled

- weight: 14.2 kg
- load: 150 kg
- measurements (folded):
  - height: 120 cm
  - width: 51 cm
  - depth: 20 cm

## How do you control the chair?

By way of the rotating of the specially designed glidebelts a unique glide / brake system comes into existence. This makes the Escape-Carry Chair® brake easily on the stairs.

This system is effective for almost every kind of stairs\*\*.

The braking operation is optimised by the weight of the occupant in combined action with the pressure of the hands on the handle in the direction of the stairs, that is carried out by the helper.

**\*For an optimal safe evacuation we advise to evacuate using two trained helpers.**

\*\* Depending on the type and the edging of the stairs.

## Most extended model

StandardPLUS model with arm and footrests

## Technical details StandardPLUS with arm- and footrests:

- weight: 16.7 kg
- load: 150 kg
- measurements (folded):
  - height: 120 cm
  - width: 57 cm
  - depth: 20 cm

## Arm- and footrests

Both Carry Chair® models are extendable with arm- and / or footrests. This support will give the occupant a comfortable and secure 'feeling'.

Footrest (optional extension)

Armrests (optional extension)
